Texzon Utilities, a leader in the energy marketplace with over 20 years of experience, has announced a strategic partnership with Spectral Oil and Gas to develop onsite power generation. Spectral Oil and Gas is an innovative technology-based energy company that applies modern advancements to older oil fields discovered before World War II.

The collaboration between Texzon Utilities and Spectral Oil and Gas aims to revolutionize onsite power generation and decarbonization by harnessing the potential of various new energy technologies. These technologies include solar, wind, hydrogen, geothermal and long duration storage which will be combined to create a more sustainable efficient power generation solution and more efficient oil field operations.

Texzon Utilities' extensive industry expertise and Spectral Oil and Gas' innovative approach make them ideal partners for this venture. With their combined knowledge and resources, they are poised to make significant advancements in the field of decarbonized onsite power generation.

This partnership holds great promise for industry players, investors, and the general public. By leveraging new energy technologies, Texzon Utilities and Spectral Oil and Gas are paving the way for a greener and more sustainable future. On site solar and energy storage will provide lower cost carbon neutral power to the oil field operations. The project will convert idle wells to geothermal to provide 24/7 carbon free energy. The project will also convert flare gas to electricity for on site bitcoin mining. In addition to onsite power generation the initial project in Humble, TX will have a modular 1 MW AI Data Center, EV charging stations and Hydrogen fueling.

Texzon Utilities' position as an industry leader with over 20 years of experience in the energy marketplace sets the stage for groundbreaking advancements in onsite power generation. The company's track record of success and expertise in the field will undoubtedly drive the collaboration with Spectral Oil and Gas to new heights.

Spectral Oil and Gas, as the first of a new generation of technology-based energy companies, brings a fresh perspective to the table. By applying modern exploration and development advancements to older oil fields, they are able to unlock new possibilities for energy generation and contribute to the overall sustainability of the industry.

Texzon Utilities and Spectral Oil and Gas are excited to embark on this journey together. Their shared commitment to innovation and sustainability will drive the development of onsite power generation using a combination of solar, wind, hydrogen, and geothermal technologies. This partnership represents a significant step forward in the quest for cleaner and more efficient energy solutions.

With the launch of this strategic partnership, Texzon Utilities and Spectral Oil and Gas are setting a new standard in the energy industry. Their collaborative efforts in developing onsite power generation will not only benefit the companies involved but also the entire energy sector and the environment as a whole. By embracing new technologies and working together, they are shaping a more sustainable future for generations to come.
